## BRAKE LINKAGE ADJUSTMENT

1. Before adjusting brake linkage, brake cam lever must be properly adjusted on disc brake (See Owners Manual).
2. With brake clutch pedal engaged (up and to the rear against stop), disc brake cam lever to the rear against stop and rod guide (Ref. No. 17) as far forward as slot will allow, adjust brake rod nut (Ref. No. 22) until 1/4" of clearance is obtained between nut and spring (Ref. No. 21).

## CLUTCH LINKAGE ADJUSTMENT

1. With clutch pedal engaged (Pedal up against stop), apply 15-20 lbs. to force pulley idler (Ref. No. 10) to firmly seat transmission drive belt. Adjust clutch rod nut (Ref. No. 22) so clearance between nut and end of rod guide is 7/8" to 1".
2. Fully depress clutch pedal and lock parking brake. Hold clutch rod (Ref. No. 27) so nut (Ref. No. 22) is against rod guide (Ref. No. 23) and position set collar (Ref. No. 25) against spring (Ref. No. 24) with zero clearance. Be sure spring (Ref. No. 24) is seated as far as possible over rod guide (Ref. No. 23). Tighten set collar, spring should be free to rotate.
